

Task 3: Wardrobe

Karel was warned by his wife to get her closet in order. In the columns of the map hang pieces of clothes that are hung on a hanger. Karel's task is to arrange things in the wardrobe so that they hang from the longest to the shortest in the direction from right to left. Things can only hang on the hanger, and the wardrobe can contain partitions that can divide the hanger into several parts. Karel returns to his original position after a successful wash.

When uploading your program, use in the function `turn_on()` map name `task_3.kw`.

Initial situation

At the beginning, Karel is at the beginning of the line where the tags are hanging and he has no tags in his backpack.

The end situation

After cleaning, Karel will move back to his starting position.
